

## SJUSJØEN

On June the 18<sup>th</sup>, we made a trip to Lake Sjusjøen. We drove first to Solveig Andersen in Lillehammer and she joined us to Sjusjøen.

On our way through [Brumunddal](#) we passed [Mjøstårnet](#), which is the world's tallest wooden building ([Wikipedia](#)).

This is [Botsenden](#), a part of [Mjøsa](#) north of Brumunddal.

Here we have crossed [Mjøsbrua](#) and look over to the east side of Mjøsa.

Here we come to [Lillehammer](#). The large white building on the left is [Lillehammer Hospital](#). We see [Lillehammer church](#) on the right.

Here we can see [Lysgårdsbakkene](#) at the rear.

This is just before we get to [Mesnali](#). The white building in the middle of the picture is [the Montebello Center](#).

This sign is between Mesnali and Sjusjøen. Gunhildseter road. A “seter” is the same as a [shieling](#).

At the start of the road is this sign.

There is some forest along Gunhildsætervegen.  
The trees are not tall as this is at 700 meters above sea level.

There are also some cabins in the area. Here is one with a [roundpole fence](#) around.

We did not find the shieling immediately. It is located a short distance from the road. There have been several houses here, but they are about to be taken over by nature.

This is the shieling.

Vegetation around the house.

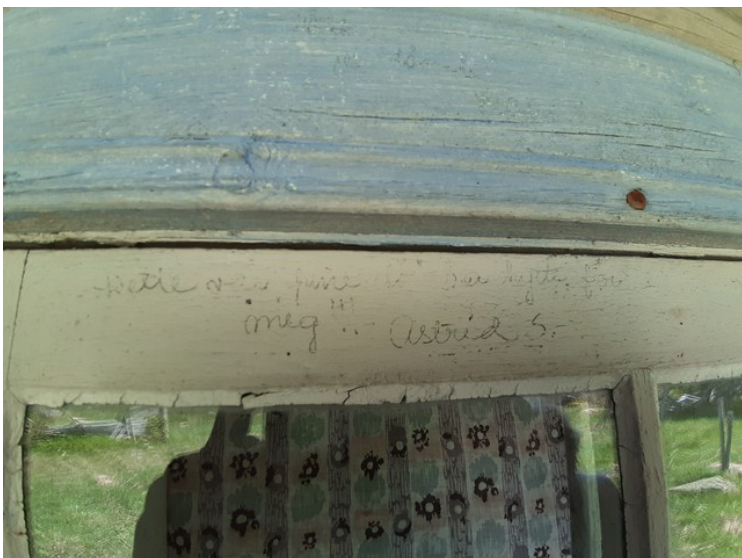

Solveig and I outside the shieling.

This window is a little special, because some Easter guests have written greetings on the window profiles.

Fence around the neighbor cabin.

Here were some sheep with lamb.

The lamb became curious about us.

Anne Berit and Solveig found a bench to sit on.

The next stop was at [Sjusjøen](#). There is a large cabin and caravan center here, [Sjusjøtunet hytter og CaravanSenter](#).

There is a café, [Sjusjøtunet Kafé](#), at the center, where we had planned to have lunch.

A big snow pile is still here.

Lot of caravans. We can see [Sjusjøen](#) in the background.

The entrance to the café.

We all had “elgkarbonade”. It was very good. “Elgkarbonade” is a flat meatball made from ground meat from a moose.

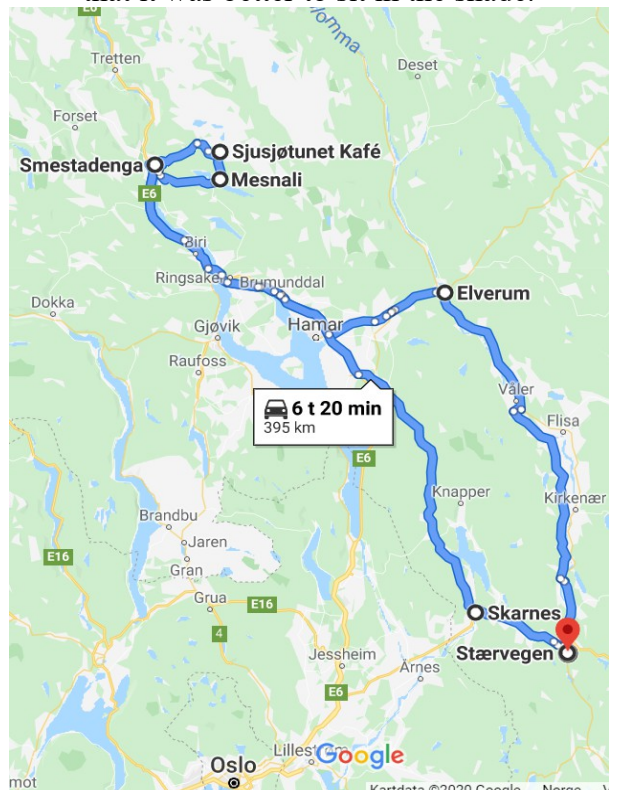

We were eating outside.

When we had eaten, the sun came. Then we found out that it was better to sit in the shade.

When we got home we saw that the temperature was over 30 degrees.

This is the route we drove that day.
